

SOLUTION OVERVIEW

Security, Simplified for your Business

LastPass Business: Password Management with Advanced Multi-Factor Authentication (MFA)

When poor passwords cause 80 percent of data breaches,¹ it's clear that passwords alone won't protect your business. How can you ensure critical information is secure without adding friction for users? Employees understand the need for security, but they expect technology to be simple, convenient, and fast. As a result, businesses are more challenged than ever to secure passwords and manage authentication across a remote hybrid environment without disrupting end users.

LastPass reduces friction for employees while increasing control and visibility for IT with a password management and multi-factor authentication solution that is easy to manage and effortless to use. With combined password management and multi-factor authentication, businesses can secure all web logins, while adding a layer of security on other endpoints to lock down every access point to their business.

LastPass Business

LastPass Business delivers Password Management to empower employees to generate, secure, and share credentials seamlessly, while providing valuable insight and control to Admins and ensuring protection through LastPass' zero-knowledge security infrastructure.

LastPass Advanced Multi-Factor Authentication

LastPass Multi-Factor Authentication secures every access point to your business. From cloud and legacy apps to VPN and workstations, LastPass MFA adds an additional layer of security on top of your endpoints to maximize security.

**Password management
and multi-factor
authentication**

**Comprehensive
security controls**

**Flexible
integrations**

**Easy user management
and reporting**

Frictionless employee experience

Extra security shouldn't be a blocker for employee productivity. Keep things simple with one vendor for employees to access and authenticate into every tool. With LastPass, employees can quickly access the sites or tools required for their job with the added protection of multi-factor authentication.

Convenient password sharing

Secure and flexible sharing for collaborative teams – from IT to marketing groups – while maintaining accountability. By using generated passwords and revoking access in real time, LastPass ensures that company data doesn't leave with departing employees.

Flexible, granular controls

Protect your business with an extensive list of password management and multi-factor authentication policies to manage users at the individual, group, and organizational level. Set granular policies, like specifying an app that can only be accessed from certain locations or at certain times.

Passwordless access

Passwords are an unending source of frustration and risk. With LastPass, businesses can remove the password burden from their employees. Password management captures and stores all web logins, while multi-factor authentication removes passwords where possible through passwordless authentication. Together, password management and multi-factor authentication improve security while increasing employee productivity as the burden of passwords is lifted.

Biometric and contextual intelligence

By combining biometric and contextual intelligence, LastPass MFA proves a user's identity with a combination of factors, without increasing the friction of the login experience. The user proves they are who they say they are with biometric factors like fingerprint or face ID. The device also proves who they are behind the scenes with contextual factors like phone location or IP address, all while providing a passwordless experience.

Plug-and-play integrations

Through scalable, automated integrations with user directories, LastPass simplifies employee onboarding and offboarding by providing seamless integrations for Microsoft Active Directory, Microsoft Azure AD, OneLogin, Okta, Google Workspace, PingOne, and PingFederate.

Plus, LastPass integrates with Security Information and Event Management (SIEM) solutions to provide greater visibility to your business's network with advanced reporting and alert capabilities. LastPass integrates with Splunk and Azure Sentinel with more to come.

Actionable insights with Dark Web Monitoring

Stop worrying about data breaches. LastPass constantly monitors your employees accounts and sends them an alert if information is compromised to keep their accounts safe.

Security by design

LastPass is built to keep data private and secure. User data is encrypted and decrypted at the device level so that the master password – and the sensitive data stored in LastPass – are kept secret, even from us. In addition, biometric data is encrypted at the device level and never leaves the user's device.

These features deliver the control businesses require and the convenience users expect:

Central Admin Console	The admin dashboard offers automated user management, policies, diagnostic dashboards and more.
Universal Password Management	Simplify access to all apps as well as generate and automatically capture, store, and fill credentials for any login.
User Integrations	Automate onboarding and offboarding, group management, federate, and more with AD, Azure AD, Okta, OneLogin, Google Worskspace, PingOne, PingFederate, or a custom API.
100+ Security Policies	Enforce best practices and control password behavior across the business.
Detailed Security Reports	Tie actions to individuals with automated, detailed reporting that helps your business maintain compliance. Dive even deeper with SIEM integrations including Splunk and Azure Sentinel.
Secure Password Sharing	Give teams a flexible, safe way to share access to apps without sacrificing accountability or security.
Dark Web Monitoring	LastPass monitors your employees accounts and sends them an alert if information is compromised to keep their accounts safe.
Advanced Multi-Factor Authentication	Access to the LastPass Authenticator application that secures cloud and legacy apps, VPNs, and workstations with passwordless access. Granular geofencing, time and IP address policies to enable admin control and increase security.
Single Sign-On	Make critical business tools accessible to employees with simplified access to up to three cloud applications.
Families as a Benefit	Employees will be provided a personal LastPass account, including 5 additional licenses to share with their family or friends, granting password protection with LastPass.

Additional Offerings:

LastPass Advanced Single Sign-On	LastPass Single Sign-On simplifies employee access to an unlimited number of cloud applications, while streamlining provisioning cloud applications for IT– all in the same application that they trust to store their passwords. With single sign-on for top priority apps, and password management to capture and secure everything else, LastPass protects every access point and conveniently connects employees to their work.
