

## SOLUTION OVERVIEW

# Secure Every Access Point with One Simple Solution

## LastPass Business: Password Management with Advanced Single Sign-On (SSO)

More devices, applications, networks, and users increase the complexity of managing and protecting employee access. While employees just want to work efficiently from anywhere, businesses need to ensure the proper security controls are in place.

Together, LastPass reduces employee friction while increasing control and visibility with an access solution that's easy to manage and effortless to use. With single sign-on for top priority apps, and password management to capture and secure everything else, LastPass protects every access point and conveniently connects employees to their work.

### LastPass Business

LastPass Business delivers Password Management to empower employees to generate, secure, and share credentials seamlessly, while providing valuable insight and control to Admins and ensuring protection through LastPass' zero-knowledge security infrastructure.

### LastPass Advanced Single Sign-On

LastPass Single Sign-On simplifies employee access to an unlimited number of cloud applications, while streamlining provisioning cloud applications for IT—all in the same application that they trust to store their passwords.

**Single sign-on and  
password management**

**Comprehensive  
security controls**

**Flexible  
integrations**

**Easy user management  
and reporting**

### **Better together: Single sign-on and password management**

With an integrated single sign-on and password management solution, businesses can enforce single sign-on across the entire organization to secure every login coupled with password management to secure every credential. Single sign-on and password management together secures every employee login with consistent security policies and a seamless user experience.

### **Frictionless employee experience**

Keep things simple with one place to store and access every tool. With LastPass, employees have simple access to supported cloud applications through single sign-on and can store all other websites or credentials in their LastPass vault. LastPass does all the work of connecting, creating, remembering, and filling passwords, so employees can focus on real work.

### **Unified admin control**

Give a holistic view of end-user activity across single sign-on and password management in a single, easy-to-use dashboard. LastPass ensures businesses give the right access to the right people at the right time. Eliminate tedious, manual tasks and provide visibility into access security across the business.

### **Flexible, granular controls**

Holistic security doesn't have to be complex. LastPass offers 100+ policies that manage users at the app, individual, group, or organizational level, so you can customize access requirements to meet the needs of your business. Ensure policies are consistent across single sign-on and password management.

### **Convenient password sharing**

Secure and flexible sharing for collaborative teams – from IT to marketing groups – while maintaining accountability. By using generated passwords and revoking access in real time, LastPass ensures that company data doesn't leave with departing employees.

### **High adoption, fast results**

LastPass is not only easy to set up and maintain, but self-guided resources and built in dashboards also help admins with rollout and employee communications so businesses can achieve better results with no extra services required.

### **Actionable insights with Dark Web Monitoring**

Stop worrying about data breaches. LastPass constantly monitors your employees accounts and sends them an alert if information is compromised to keep their accounts safe.

### **Designed for security first**

We're uncompromising when it comes to data security. User data is encrypted and decrypted at the device level so that the master password – and the sensitive data stored in LastPass – are kept secret, even from us. Plus, you can augment security for LastPass accounts with multi-factor authentication.

**These features deliver the control businesses require and the convenience users expect:**

<b>Central Admin Console</b>	The admin dashboard offers automated user management, policies, diagnostic dashboards and more.
<b>Universal Password Management</b>	Simplify access to all apps as well as generate and automatically capture, store, and fill credentials for any login.
<b>User Integrations</b>	Automate onboarding and offboarding, group management, federate, and more with AD, Azure AD, Okta, OneLogin, Google Workspace, PingOne, PingFederate, or a custom API.
<b>100+ Security Policies</b>	Enforce best practices and control password behavior across the business.
<b>Detailed Security Reports</b>	Tie actions to individuals with automated, detailed reporting that helps your business maintain compliance.
<b>Secure Password Sharing</b>	Give teams a flexible, safe way to share access to apps without sacrificing accountability or security.
<b>Dark Web Monitoring</b>	LastPass monitors your employees accounts and sends them an alert if information is compromised to keep their accounts safe.
<b>Advanced Single Sign-On</b>	Make critical business tools accessible to employees with simplified access to an unlimited number of cloud applications.
<b>Multi-Factor Authentication</b>	Access to the LastPass Authenticator application to provide multi-factor authentication protection on the password vault and single sign-on applications.
<b>Families as a Benefit</b>	Employees will be provided a personal LastPass account, including 5 additional licenses to share with their family or friends, granting password protection with LastPass.

**Additional Offerings:**

<b>LastPass Advanced Multi-Factor Authentication</b>	LastPass Multi-Factor Authentication secures every access point to your business. From cloud and legacy apps to VPN and workstations, LastPass MFA offers passwordless access while maximizing security with customizable security policies and adaptive authentication technology. By adding LastPass MFA, your business can secure all web logins, while adding endpoint verification – all with one, easy-to-use mobile app.
