In a compromised credentials crisis, what can be done when passwords are becoming more of a problem than a solution?

Password[less] envisions a world that relies less on passwords in order to keep our credentials more secure.

In the midst of this evolution to password[less], where does your company stand?

Passwords keep us safe, but they are also used against us.

Especially when they rely so heavily on human behavior, which can be easily exploited.

58%

report phishing, social engineering, and compromised credentials as the biggest risks to their businesses.

40%

of IT leaders are concerned about malware, brute force attacks, and business email compromise.

Businesses are looking to what they know to get them to password[less].

59%

of respondents think password managers are the best way to transition an organization to password[less].

The end of 2023 will be an important milestone in this evolution.

67%

of businesses will be using a passwordless solution by the end of the year.

User experience and cyber risk are significant drivers for password[less].

73% of IT leaders foresee ease of use as a major benefit. Reduction of cyber risk is a close second with 71% of respondents.

Passkeys will play an important role.

92%

of respondents believe they will have a significant impact on their business environment
